

# Missing Images Report

BSTBPC website (frontend): images the pages ask for that are not in the project

| Item    | Detail                                                                                               |
|---------|------------------------------------------------------------------------------------------------------|
| Date    | 28 September 2026                                                                                    |
| Project | Bihar-Textbook (React / Vite frontend)                                                               |
| Scope   | Public pages only. Every hard-coded image path in the code was checked against the files in public/. |
| Result  | <b>58 image files are missing</b> (60 references), plus 7 sign-language animations that don't load.  |

## 1. Summary

When a page asks for an image that does not exist, the web server does not answer "not found": it sends back the website's own HTML page instead. The browser cannot show HTML as a picture, so visitors see a broken-image icon or an empty box, and the page downloads the HTML for nothing.

The missing files fall into three groups by how much they matter today:

| Group                            | Files | What visitors see                                                                                                                    |
|----------------------------------|-------|--------------------------------------------------------------------------------------------------------------------------------------|
| <b>Broken on page load</b>       | 5     | A broken image as soon as the page opens. Fix these first.                                                                           |
| Broken when this part is opened  | 10    | A broken image when the visitor opens that activity, game step or module.                                                            |
| Not shown yet (lesson data only) | 43    | Nothing today: the lesson data lists these images but no screen displays them yet. Needed only if lesson images are shown in future. |
| Sign-language animations         | 7     | The still picture shows instead of the animation (a fallback exists).                                                                |

Per page:

| Page                                                  | Missing files | Broken on load | Broken when opened | Not shown yet |
|-------------------------------------------------------|---------------|----------------|--------------------|---------------|
| VR Tech Learning<br>/vr-dashboard (Tech Learning tab) | 26            | 0              | 8                  | 18            |

| Basic Skills<br>/basic-skills                         | 4             | 2              | 2                  | 0             |
| Sign Language<br>/sign                                | 1             | 1              | 0                  | 0             |
| Audio Books<br>/audio-books                           | 1             | 1              | 0                  | 0             |
| Linguistics<br>/linguistic                            | 1             | 1              | 0                  | 0             |

## 2. How to fix

- Add each file to the frontend project at exactly the path listed, under Bihar-Textbook/public. Example: /images/vr/vr\_hero.png goes to Bihar-Textbook/public/images/vr/vr\_hero.png.
- Keep the exact file name and extension, including .png or .webp as listed. File names are case-sensitive on the server.
- Choose each picture from the "Shows" column (the lesson or section title it belongs to), not from the file name. Some file names do not match their section (e.g. cs\_fishing\_hooks.webp belongs to "What is a Digital Footprint?").

- Suggested size: about 1200 px wide for hero and illustration images, 800 x 600 px for lesson and section pictures; under 300 KB each (WebP preferred where the path ends in .webp).
- Rebuild and redeploy the frontend after adding the files. No code change is needed.
- If an image is no longer wanted, tell the development team and they will remove the reference instead.

### 3. Missing files by page

#### VR Tech Learning: /vr-dashboard (Tech Learning tab) (26 files)

| File to add (exact path)           | Shows                                                                                | Status today                     | Referenced in (src/)           |

## 4. Sign-language animations (/sign-learn)

For each sign, the page looks for an animated GIF at `/explore sign/<name>.gif`, where the name comes from the sign's still image. Six GIFs exist but are saved with spaces in the name, so they are not found; one does not exist at all. In every case the page falls back to the still image, so nothing looks broken, but the animation is missing.

| Page looks for                               | File that exists                              | Fix                                                               |
|----------------------------------------------|-----------------------------------------------|-------------------------------------------------------------------|
| <code>/explore sign/goodafternoon.gif</code> | <code>/explore sign/good afternoon.gif</code> | Rename the existing file to <code>goodafternoon.gif</code>        |
| <code>/explore sign/goodevening.gif</code>   | <code>/explore sign/good evening.gif</code>   | Rename the existing file to <code>goodevening.gif</code>          |
| <code>/explore sign/goodmorning.gif</code>   | <code>/explore sign/good morning.gif</code>   | Rename the existing file to <code>goodmorning.gif</code>          |

Also on `/sign-learn`: typing a digit or a Hindi letter in the "spell a word" box asks for an alphabet image that doesn't exist (only A–Z are in `/images/signlanguage/alphabets/`). A hand-shape fallback is shown, so nothing looks broken.

## 5. Fixed in code (no images needed)

These unwanted requests were removed from the code during the same clean-up, so they do not need files:

- `/images/hero/classroom.webp`: was preloaded on every page but used nowhere. The preload is removed.
- `/images/placeholders/no-cover.webp` (book pages): now uses the existing `/bookcover.webp`.
- `/PDFs/Class_*/...manifest.json` and guessed chapter PDFs: removed. Books and chapters come only from the admin panel.
- `/images/cybersecurity/cs_quiz_background.webp`: now uses the existing `rhs.webp`.
- `/images/missions/teacherhov.webp`: the hover image is no longer built from the file name.
- NCERT covers from `ciet.ncert.gov.in` (book list), the `ui-avatars.com` MD photo and the built-in leader and MD photos: replaced by the uploaded image, or initials when none is uploaded.

## 6. Not requested (no action)

- `/images/ai/hero_new.webp` in `src/ai/AiIntelligence.jsx`: that file is not used by any page.
- `/api/uploads/documents/x.pdf` in `src/services/noticeService.js`: only an example inside a code comment.
